WHAT IS CLAIMED IS:

| 1 | A method for managing access to an I/O device, said | | | |
|----|------------------------------------------------------------------------|--|--|--|
| 2 | method comprising: | | | |
| 3 | communicatively coupling first and second nodes, having | | | |
| 4 | respective first and second bus controllers, and a logical I/O | | | |
| 5 | device by means of a bus and said first and second controllers: | | | |
| 6 | receiving on said first controller a request to reserve said | | | |
| 7 | logical I/O device; and | | | |
| 8 | communicating by means of said bus from said first to said | | | |
| 9 | second controller a reservation request for said logical I/O device | | | |
| 10 | for execution by said second controller, in response to said | | | |
| 11 | receiving. | | | |
| | | | | |
| 1 | 2. The method of claim $oldsymbol{1}$, further comprising the step of | | | |
| 2 | reserving said logical I/O device for said first node within | | | |
| 3 | said second controller, in response to said reservation request | | | |
| 4 | communication. | | | |
| | | | | |
| 1 | 3. The method of claim 2, wherein said step of reserving | | | |
| 2 | comprises: | | | |
| 3 | determining whether said logical I/O device is already | | | |
| 4 | reserved within said second controller: | | | |
| 5 | communicating a response, indicating failure to reserve said | | | |
| 6 | logical I/O device, to said first node when said logical I/O device | | | |
| 7 | is already reserved; and | | | |
| 8 | otherwise, reserving said logical I/O device for said first | | | |
| 9 | node within said second controller, and communicating to said first | | | |
| 10 | node a response indicating success in reserving said logical I/O | | | |

device.

11

| 1 | 4. The method of claim 3, further comprising the steps of: |
|----|--------------------------------------------------------------------------|
| 2 | receiving said response to said communicated reservation |
| 3 | request: |
| 4 | aborting the method for managing access when said response |
| 5 | indicates failure to reserve and said first controller is |
| 6 | subordinate to said second controller; and |
| 7 | otherwise, delaying and communicating again a reservation |
| 8 | request for said logical I/O device when said response indicates |
| 9 | failure to reserve and said first controller is dominant to said |
| 10 | second controller; |
| 11 | otherwise responding, indicating success, to said received |
| 12 | reservation request. |
| | |
| 1 | 5. The method of claim $oldsymbol{1}$, wherein said step of |
| 2 | communicatively coupling comprises |
| 3 | communicatively coupling said first and second nodes and said |
| 4 | logical I/O device depending from a multi-logical-device, third |
| 5 | controller by means of said bus and said first and second |
| 6 | controllers. |
| | |
| 1 | |
| 2 | receiving and before said step of communicating, the following steps are |
| 3 | penformed: |
| 4 | in response to said reservation request, determining whether |
| 5 | said logical I/O device is already reserved within said first |
| 6 | controller, and aborting said method for managing access when said |
| 7 | logical I/O device is already reserved; and |
| 8 | otherwise, reserving said logical I/O device for said first |
| 9 | node within said ∱irst controller. |
| | |
| 1 | 7. A computer-readable medium for data storage wherein is |
| | |

lmendenhall:1008403v1:000301 16:58

| 1 | located a computer program for causing a first node in a computer system, |
|-----|---------------------------------------------------------------------------|
| 2 | having a first bus controller, to manage access to a logical I/O device |
| 3 | in said computer system by |
| 4 | receiving on said first controller a request to reserve said |
| 5 | logical I/O device; and |
| 6 | communicating by means of a bus from said first controller to |
| 7 | a second controller of a second node a reservation request for said |
| 8 | logical I/O device for execution by said second controller, in |
| 9 | response to said receiving. |
| | |
| 1 | 8. The computer-readable medium of claim 7, wherein said |
| 2 | computer program causes access management by further |
| 3 | reserving said logical I/O device for said first node within |
| 4 | said second controller, in response to said reservation request |
| 5 | communication. |
| | |
| 1 | 9. The computer-readable medium of claim 8, wherein said |
| 2 | step of reserving in said computer program comprises |
| 3 | determining whether said logical I/O device is already |
| 4 | reserved within said second controller; |
| 5 | communicating a response, indicating failure to reserve said |
| 6 | logical I/O device, to said first node when said logical I/O device |
| 7 | is already reserved; and |
| 8 | otherwise, reserving said logical I/O device for said first |
| 9 | node within said second controller, and otherwise, reserving said |
| 0 | logical I/O device for said first node within said second |
| l 1 | controller, and communicating to said first node a response |
| 12 | indicating success in reserving said logical I/O device. |
| | |
| 1 | 10. The computer-readable medium of claim 7, wherein after |
| 2 | said step of receiving and before said step of communicating in said |

| 1 | computer program, the following steps are performed: | | | |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------|--|--|--|
| 2 | in response to said reservation request, determining whether | | | |
| 3 | said logical I/O device is already reserved within said first | | | |
| 4 | controller, and aborting said method for managing access when said | | | |
| 5 | logical I/O device is already reserved; and | | | |
| 6 | otherwise, reserving said logical I/O device for said first | | | |
| 7 | node within said first controller. | | | |
| 1 | 11. A computer system comprising: | | | |
| 2 | first and second nodes having respective first and second bus | | | |
| 3 | controllers, said first controller comprising | | | |
| 4 | the computer-readable medium of claim 7; and | | | |
| 5 | a CPU, coupled to said medium, for executing said | | | |
| 6 | computer program in said medium; | | | |
| 7 | an I/O device: and | | | |
| 8 | a bus communicatively coupling said first and second nodes | | | |
| 9 | and said logical I/ $\oint \!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!\!$ | | | |
| 10 | controllers. | | | |
| | | | | |
| 1 | 12. A method for managing access to a logical I/O device, | | | |
| 2 | said method comprising: | | | |
| 3 | communicatively coupling first and second nodes having | | | |
| 4 | respective first and second bus controllers, and a logical I/O | | | |
| 5 | device by means of a bus and said first and second controllers; | | | |
| 6 | receiving on said first controller a request to release said | | | |
| 7 | logical I/O device: and | | | |
| 8 | communicating by means of said bus from said first to said | | | |
| 9 | second controller a release request for said logical I/O device for | | | |
| 10 | execution by said second control/er, in response to said receiving. | | | |
| | | | | |
| 1) The method of claim 12 , wherein before said step of | | | | |
| lmeno | denhall 1008403v1:000301 16:58 61 | | | |

| 1 | receiving, the following steps are performed: | | | |
|----|---------------------------------------------------------------------------|--|--|--|
| 2 | receiving on said first controller a request to reserve said | | | |
| 3 | logical I/O device; and $\int_{-\infty}^{\infty}$ | | | |
| 4 | communicating by means of said bus from said first to said | | | |
| 5 | second controller a reservation request for said logical I/O device | | | |
| 6 | for execution by said second controller, in response to said | | | |
| 7 | receiving a reservation request. | | | |
| | | | | |
| 1 | 14. The method of claim 12 , further comprising the step of | | | |
| 2 | releasing said logical I/O device within said second | | | |
| 3 | controller, in response to said release request communication. | | | |
| 1 | 15. The method of claim 12 , wherein said step of | | | |
| 2 | | | | |
| 3 | communicatively coupling comprises | | | |
| | communicatively coupling said first and second nodes and a | | | |
| 4 | logical device depending from a multi-logical-device, third | | | |
| 5 | controller by means of said bus and said first and second | | | |
| 6 | controllers. | | | |
| 1 | 16. A computer-readable medium for data storage wherein is | | | |
| _ | | | | |
| 2 | located a computer program for causing a first node in a computer system, | | | |
| 3 | having a first bus controller, to manage access to a logical I/O device | | | |
| 4 | in said computer system by | | | |
| 5 | receiving on said first controller a request to release said | | | |
| 6 | logical I/O device; and | | | |
| 7 | communicating by means of a bus from said first controller to | | | |
| 8 | a second controller of a second node a release request for said | | | |
| 9 | logical I/O device for execution by said second controller, in | | | |
| 10 | response to said receiving. | | | |
| 1 | The computer-readable medium of claim 16, wherein said | | | |

computer program manages access by further

releasing said logical I/O device within said second controller, in response to said release request communication.

A computer system comprising: 18. first and second nodes having respective first and second bus controllers, said first controller comprising the computer-readable medium of claim 16; and a CPU, coupled to said medium, for executing said 5 computer program in said medium; 6 an I/O device: and 7 a bus communicatively coupling said first and second nodes 8 and said logical I/O device by means of said first and second 9 controllers. 10

An apparatus for managing access to a logical I/O device, said apparatus comprising: means for communicatively coupling first and second nodes, having respective first and second bus controllers, and a logical

means for receiving on said first controller a request to reserve said logical I/O device; and

7 means for communicating from said first to said second 8 9 controller a reservation request for said logical I/O device for

execution by said second contholler, in response to said receiving. 10

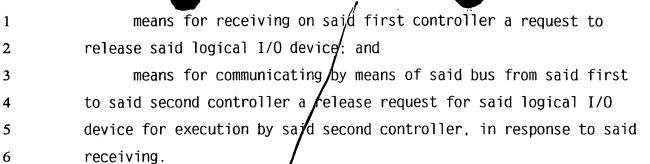

1 20. An apparatus for managing access to a logical I/O device, said apparatus comprising: 2

3 means for communicatively coupling first and second nodes,

having respective first and second bus controllers, and a logical 4

I/O device; 5

I/O device:
